

Molnupiravir

Is not part of a formal UK Vet FIP treatment protocol (as of December 2022) but has been supported by Dr Malik for use in all FIP cats.

He explains how owners can source legal Merck licensed Molnupiravir in his guide:
<https://fipcatsaustralia.org.au/treatment-for-fip-in-cats/>

Dr Malik has also kindly offered guidance to individual owner queries via email.

Advice from FIP Cats Australia via their Facebook page re Molnupiravir:

"Molnupiravir can be given with or after food. To be given 1 hour after GS-441524.
(Molnupiravir is a twice a day medication)

If using both medications, follow the above recommendations. Give GS-441524 before food and Molnupiravir with food or after feeding. This will give your cat/kitten the best chance of beating FIP as the medications will be absorbed correctly."
